Cognivity

packages

We assess your reaction time, concentration, verbal and visual memory, possible symptoms of depression and anxiety. Using modern diagnostic tools, we also scan for early stages of neurological diseases. Burnout, depression and age-related neurological diseases often develop slowly, and it's easy to overlook their origins, so it's important to regularly look at cognitive functions that reflect the state of neural connections.

- assessment of cognitive functions
- discussing the results with a psychologist (45min)
